

SAFE? SAFE!

INTEGRATE NOW: THE **GRATUITOUS SAFETY-KIT** FOR SMART LIFT AND HYMAX S LIFTS

Dear Sirs / Madams

December 7, 2015

Nussbaum Company would like to request your assistance to improve the safety of lifts in your workplace. We recently discovered that the electromechanical lifts of the series SMART LIFT and HYMAX S need a mechanical safety update. This consists of adding a guiding rail to the mechanical ratchet in the lower part of the lift. With 100.000 units sold worldwide we have identified 3 cases in which the safety hook did not lock in the ratchet because these particular ones were not properly welded to the spindle tube.

Should the improbable case occur that the lift nut on your lift breaks, the safety system will continue to work as before. However, the mechanical latch will not lock the lift preventing its further use. It is our priority to ensure that all back-up mechanisms work properly and to this end, we have developed an easy to install 'Safety-Kit' that you can get free of charge through a website made for this purpose: www.nussbaum-group.de/safety-kit.

We cannot stress enough the need for you to install this kit with the least possible delay. On the above mentioned website, you may find detailed information on the subject as well as the chance to order the kits you need.

When you finish the installation, do not forget to register either through the web site or by faxing in the filled out form that goes with the kits. If you do so, we would like to enter you into a prize draw taking place every month from January through May 2016 for five of our short stroke lifts, the Sprinter Mobile.

Please order the Safety-Kit now in our web site: www.nussbaum-group.de/safety-kit

We thank you for your involvement and remain

Yours faithfully

A handwritten signature in blue ink, appearing to be 'SN', is written over a light blue horizontal line.
