

VEHICLE LIFT USER TRAINING

For Workshop Technicians

This on-site training will provide your Technicians with the required knowledge to perform checks on all the styles of vehicle lifts in a workshop.

At Straightset we use our own GEA Accredited lifting engineers to deliver a comprehensive programme of familiarisation. After which Technicians should be competent in identifying how and how not to use vehicle lifts and how to reduce risk.

The Training will cover:

- Pre-use checks.
- Lift operation.
- Daily, weekly and monthly checks.
- Do's and don'ts.
- Risks and Hazard awareness.

The training can be conducted in groups of up to 6, on site and we will train on all the varieties of lifts in the workshop on that site. So, if a site has Two post, Four post and in-ground lifts the training will be conducted on ALL the types of lift in that workshop.

Each trained technician will receive a certificate of attendance listing the types of the vehicle lifts on which they have been instructed and a useful reference booklet. We recommend re-training is carried out every 3 years.
